## Non-compartment anlysis software.

See documentation:

• Dev: https://pharmcat.github.io/MetidaNCA.jl/dev/

• Stable: https://pharmcat.github.io/MetidaNCA.jl/stable/

#### Validation purpose

The main validation purpose is confirmation by examination and provision of objective evidence that software specifications conform to user needs and intended uses, and that the particular requirements implemented through software can be consistently fulfilled.

#### Requirements

- Julia 1.6.\* (or higher) installed
- Julia packages from dependence list installed (see Project.toml)

#### Developer software life cycle

- Development stage
- Testing procedures development
- Performing testing procedures on local machine
- Push to master branch
- Performing testing procedures with GitHub Actions
- Make pull request to the official registry of general Julia packages (if nessesary)
- Make release (if previous completed)

#### Versions

- X.Y.Z patch release (no breaking changes)
- X.Y.0 minor release (may include breaking changes if X = 0)
- X.0.0 major release (breaking changes, changes in public API)
- 0.#.# no stable public API
- 1.#.# or higher stable public API

## Build support

#### Tier 1

- julia-version: 1.6, 1.7
- julia-arch: x64
- os: ubuntu-18.04, macos-10.15, windows-2019

#### Installation

#### System information

• Julia version: v"1.6.4"

• Current machine: "x86 64-pc-linux-gnu"

#### Installation method

MetidaNCA.jl can be installed by executing the following command in REPL:

```
import Pkg; Pkg.add("MetidaNCA")
```

#### Version check

The installation process is checking within each testing job via GitHub Actions. Also GitHub Action chek performed before merging into JuliaRegistries/General repository (see Automatic merging of pull requests).

Current package version: "0.2.1"

## Operation qualification

This part of validation based on testing procedures entails running software products under known conditions with defined inputs and documented outcomes that can be compared to their predefined expectations. All documented public API included in testing procedures and part of critical internal methods.

#### Coverage

Code coverage report available on Codecov.io. Test procedures include all public API methods check.

• Coverage goal:  $\geq 90.0\%$ 

#### Data

Validation data available in the repository and included in the package. See Appendix 1.

#### Testing results

                                                                            15
```

## Performance qualification

Purpose of this testing procedures to demonstrate performance for some critical tasks. Results from MetidaNCA compared with Phoenix WinNonlin 8.0 results, see Appendix 2.

## Glossary

- Installation qualification (IQ) Establishing confidence that process equipment and ancillary systems are compliant with appropriate codes and approved design intentions, and that manufacturer's recommendations are suitably considered.
- Operational qualification (OQ) Establishing confidence that process equipment and sub-systems are capable of consistently operating within established limits and tolerances.
- Product performance qualification (PQ) Establishing confidence through appropriate testing that the finished product produced by a specified process meets all release requirements for functionality and safety.
- Repository GitHub repository: https://github.com/PharmCat/MetidaNCA.jl
- Master branch main branch on GitHub (link).
- Current machine pc that used for validation report generating.
